

A quick guide for observing classroom content and practice

In **High School Chemistry**, instructional time should focus on three core ideas:

PS1.

Matter and its Interactions

PS2.

Motion and stability: Forces and Interactions

PS3.

Energy

In a **High School Chemistry** class you should observe students engaged with at least one science concept and practice:

Science and Engineering Practices

- | | |
|--|--|
| Asking questions and defining problems | Using mathematics and computational thinking |
| Developing and using models | Constructing explanations and designing solutions |
| Planning and carrying out investigations | Engaging in argument from evidence |
| Analyzing and interpreting data | Obtaining, evaluating, and communicating information |

Science Concepts

•Matter and Its Interactions (PS1)

- Predict properties of ionization energy, atomic size, configuration of outer shell electrons and reactivity using the periodic table.
- Use a model to predict the products of a chemical reaction, when basic ionic and molecular compounds are produced. Explain the relative strength of ionic and covalent bonds using observable data and the concept of electronegativity.
- Relate observable properties of substances to their structure in terms of how molecules are arranged, the motion of molecules and the attractive forces between them.
- Explain how energy is transferred during endothermic and exothermic chemical reactions by bonds being broken and formed into new substances.
- Investigate the variables that impact how fast a chemical reaction occurs and explain how the motion and collisions of particles impacts that rate.
- Investigate conditions that impact the products of an equilibrium reaction, and explain how the motion and collisions of particles impacts the forward and reverse rates of a reaction until equilibrium is reached.
- Support the claim that atoms and mass are conserved during a reaction. Use balanced chemical equations and stoichiometry to calculate a specific amount of product for a reaction.
- Compare relative strengths of acids or bases based on the pH of a solution.
- Explain oxidation-reduction (redox) theory by showing how electrons are transferred within a reaction. Predict the products of a reaction using redox. Assign oxidation numbers to show how the electrons move through devices that produce electricity or prevent corrosion.
- Utilize chemical and physical properties of substances to separate and identify the components of a mixture.

•Motion and Stability: Forces and Interactions (PS2)

- Explain how the structure of polymers, ionic compounds, acids and bases, and metals impact the functional uses of different materials.
- Explain how ionic substances dissolve in polar substances. Use solubility and conductivity data to determine how much an ionic substance dissolves.
- Compare the strength and relative amount of attractive forces in solids, liquids and gases based on the motion and collisions of these particles. Use the combined gas law to determine how changes in pressure, volume and temperature impact gases.

•Energy (PS3)

- Communicate and analyze data to illustrate that the overall energy in a chemical reaction is conserved despite transfer of enthalpy and entropy that occurs.

NOTES

Comments on the Science and Engineering Practices: For a list of specific skills, see the *Science and Engineering Practices Progression Matrix* (www.doe.mass.edu/stem/review.html); Practices are skills **students** are expected to learn and do; standards focus on some but not all skills associated with a practice.

STE What to Look For The example below features three Indicators from the [Standards of Effective Practice](#). These Indicators are just a sampling from the full set of Standards and were chosen because they create a sequence: the educator plans a lesson that sets clear and high **expectations**, the educator then delivers high quality instruction, and finally the educator uses a variety of **assessments** to see if students understand the material or if re-teaching is necessary. This example highlights teacher and student behaviors aligned to the three Indicators that you can expect to see in a rigorous High School Chemistry classroom.

Expectations (Standard II, Indicator D)	Plans and implements lessons that set clear and high expectations and also make knowledge accessible for all students.					
<table border="0" style="width: 100%;"> <tr> <td style="width: 50%; text-align: center; padding: 5px;">What is the teacher doing?</td> <td style="width: 50%; text-align: center; padding: 5px;">What are the students doing?</td> </tr> <tr> <td style="vertical-align: top; padding: 5px;"> <ul style="list-style-type: none"> Communicating a lesson's objectives and their connections to unit essential questions and goals. Asking students to apply scientific knowledge and ideas when engaging with real-world problems Modeling the development of complex, testable models </td> <td style="vertical-align: top; padding: 5px;"> <ul style="list-style-type: none"> Persisting when engaging with meaningful scientific tasks Evaluating the reasoning behind currently accepted explanations or solutions Developing a complex model of multiple variables that can be tested </td> </tr> </table>			What is the teacher doing? Instruction (Standard II, Indicator A)	Uses instructional practices that reflect high expectations regarding content and quality of effort and work; engage all students; and are personalized to accommodate diverse learning styles, needs, interests, and levels of readiness.					
<table border="0" style="width: 100%;"> <tr> <td style="width: 50%; text-align: center; padding: 5px;">What is the teacher doing?</td> <td style="width: 50%; text-align: center; padding: 5px;">What are the students doing?</td> </tr> <tr> <td style="vertical-align: top; padding: 5px;"> <ul style="list-style-type: none"> Highlighting culturally appropriate and effective negotiation skills they observe in students Providing opportunities for students to work with large data sets Creating activities that require sophisticated analysis (such as finding an equation) to find patterns </td> <td style="vertical-align: top; padding: 5px;"> <ul style="list-style-type: none"> Evaluating questions and arguments (e.g., to determine whether they are testable and relevant) Using both linear and nonlinear functions to find patterns in data Using detailed statistical analysis or models that can evaluate data sets for consistency </td> </tr> </table>			What is the teacher doing? Assessment (Standard I, Indicator B)	Uses a variety of informal and formal methods of assessments to measure student learning, growth, and understanding to develop differentiated and enhanced learning experiences and improve future instruction.					
<table border="0" style="width: 100%;"> <tr> <td style="width: 50%; text-align: center; padding: 5px;">What is the teacher doing?</td> <td style="width: 50%; text-align: center; padding: 5px;">What are the students doing?</td> </tr> <tr> <td style="vertical-align: top; padding: 5px;"> <ul style="list-style-type: none"> Providing students with feedback aligned to long-term goals Using multiple formative approaches to assess student learning (e.g., mid-unit quiz, completion of investigation) Providing opportunities for students to conduct investigations that test models </td> <td style="vertical-align: top; padding: 5px;"> <ul style="list-style-type: none"> Reflecting on how they are progressing toward goals Engaging in challenging learning tasks regardless of learning needs (e.g., linguistic background, disability, academic gifts) Using exemplars to inform their work </td> </tr> </table>			What is the teacher doing?
