

A quick guide for observing classroom content and practice

In grade 3, instructional time should focus on four critical areas:

**1.**

Developing understanding of multiplication and division and strategies for multiplication and division within 100 (OA, NBT)

**2.**

Developing understanding of fractions, especially unit fractions (fractions with numerator 1) (NF)

**3.**

Developing understanding of the structure of rectangular arrays and of area (G)

**4.**

Describing and analyzing two-dimensional shapes (G)

In a **3<sup>rd</sup> grade math** class you should observe students engaged with at least one math content and practice standard:

## Mathematical Practices

- Making sense of problems and persevering in solving them
- Reasoning abstractly and quantitatively
- Constructing viable arguments and critiquing the reasoning of others
- Modeling with mathematics
- Using appropriate tools strategically
- Attending to precision
- Looking for and making use of structure
- Looking for and expressing regularity in repeated reasoning

## Content Standards

### Operations and Algebraic Thinking (OA)

- Using multiplication and division within 100 to solve word problems and describe situations involving equal groups, *arrays*, and measurement quantities, by using drawings and equations with a symbol for the unknown number (*variable*) to represent the problem
- Applying properties of operations (commutative, associative, identity and distributive) to multiply (*Students are not required to name the properties*)
- Fluently multiplying and dividing within 100, using a range of strategies and *algorithms*, such as the relationship between multiplication and division or properties of operations
- Solving two-step word problems using the four operations (whole numbers only)
- Assessing the reasonableness of answers using mental computation and estimation strategies such as *rounding*

### Number and Operations in Base Ten (NBT)

- Fluently adding and subtracting within 1000, using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction
- Using place value understanding to round whole numbers to the nearest 10 or 100
- Number and Operations—Fractions (NF)
- Understanding that fractions represent a *part-whole* relationship, beginning with *unit fractions* ( $1/b$ )
- Explaining equivalence of fractions and comparing fractions by reasoning about their size
- Understanding and representing a fraction as a number on the *number line* within the interval from 0 to 1

### Measurement and Data (MD)

- Telling and writing time to the nearest *minute*, measure time *intervals* in minutes, and solve word problems involving addition and subtraction of time intervals in minutes
- Measuring and estimating liquid volumes and masses of objects using standard metric units of *grams* (g), *kilograms* (kg), and *liters* (l) and use drawings to solve one-step word problems
- Drawing a scaled picture graph and a scaled bar graph to represent a data set with several categories, and using the graph to solve *how many more* and *how many less* problems
- Generating measurement data by measuring lengths of objects using rulers marked with halves and fourths of an inch. Recording and showing the data by making a *line plot* (*dot plot*)
- Recognizing *area* as an attribute of plane figures, measuring it by counting unit squares, and relating it to multiplication and addition (tiling)
- Solving real-world and mathematical problems involving *perimeters* of *polygons*, including finding the perimeter given the side lengths and finding an unknown side length

### Geometry (G)

- Recognizing *rhombuses*, *rectangles*, *squares*, and *trapezoids* as examples of *quadrilaterals*
- Comparing and classifying shapes by their sides and angles
- Partitioning shapes into parts with equal areas and expressing the area of each part as a *unit fraction* of the whole

**Mathematics What to Look For** The example below features three Indicators from the [Standards of Effective Practice](#). These Indicators are just a sampling from the full set of Standards and were chosen because they create a sequence: the educator plans a lesson that sets clear and high **expectations**, the educator then delivers high quality **instruction**, and finally the educator uses a variety of **assessments** to see if students understand the material or if re-teaching is necessary. This example highlights teacher and student behaviors aligned to the three Indicators that you can expect to see in a rigorous 3<sup>rd</sup> grade math classroom.

**Expectations**

(Standard II, Indicator E)

Plans and implements lessons that set clear and high expectations and also make knowledge accessible for all students.

**What is the teacher doing?**

- Communicating both the language and content objectives for students and why they are important
- Creating culturally responsive lessons that engage and sustain student attention
- Focusing attention on mathematical language (e.g., linguistic complexity, conventions, and vocabulary)
- Representing and relating solution methods orally, visually, and with concrete objects

**What are the students doing?**

- Applying mathematical strategies and concepts when engaging with meaningful real-world problems
- Using mathematical language precisely to convey meaning and understanding of concepts
- Evaluating different representations of a problem and different solution pathways

**Instruction**

(Standard II, Indicator A)

Uses instructional practices that reflect high expectations regarding content and quality of effort and work; engage all students; and are personalized to accommodate diverse learning styles, needs, interests, and levels of readiness.

**What is the teacher doing?**

- Highlighting when students draw explicitly upon class content during discussions with peers
- Encouraging students to interpret structures and formulate conjectures about mathematical situations
- Highlighting commonalities, differences, and patterns in student's ideas.

**What are the students doing?**

- Specifically choosing symbols and words to express their mathematical ideas to others
- Showing persistence and focus in working together toward a shared goal
- Drawing explicitly upon content they have learned in class in conversations with peers

**Assessment**

(Standard I, Indicator B)

Uses a variety of informal and formal methods of assessments to measure student learning, growth, and understanding to develop differentiated and enhanced learning experiences and improve future instruction.

**What is the teacher doing?**

- Conducting frequent checks for student understanding and adjusting instruction accordingly
- Prompting students to explain their reasoning and listening to their responses to identify misconceptions
- Providing exemplars that convey mathematical reasoning and understanding (both teacher and student generated)

**What are the students doing?**

- Purposefully incorporating feedback from teacher and peers into actions
- Demonstrating learning in multiple ways (e.g., student discourse, completion of class work)
- Engaging in challenging learning tasks regardless of learning needs (e.g., linguistic background, disability, academic gifts)
