In a Kindergarten math class you should observe students engaged with at least one math content and practice standard:

**Mathematical Practices**

- Making sense of problems and persevering in solving them
- Reasoning abstractly and quantitatively
- Constructing viable arguments and critiquing the reasoning of others
- Modeling with mathematics
- Using appropriate tools strategically
- Attending to precision
- Looking for and making use of structure
- Looking for and expressing regularity in repeated reasoning

**Content Standards**

**Counting and Cardinality (CC)**
- Counting to 100 by ones and tens
- Writing the numbers from 0 to 20 to represent a number of objects
- Recognizing one more and one less patterns of counting using objects
- Comparing numbers and groups of objects

**Operations and Algebraic Thinking (OA)**
- Decomposing numbers less than or equal to 10 into pairs in more than one way
- Fluently adding and subtracting within 5

**Number and Operations in Base Ten (NBT)**
- Working with numbers 11-19 to gain foundations for place value

**Measurement and Data (MD)**
- Describing measurable attributes such as length and weight and comparing using more and less to describe the difference
- Classifying objects, counting the number of objects in each category, and sorting the categories by count

**Geometry (G)**
- Identifying and describing shapes, including their position in space
- Analyzing and comparing two and three dimensional shapes in different sizes and orientations
- Composing simple shapes to make larger shapes
**Mathematics What to Look For** The example below features three Indicators from the Standards of Effective Practice. These Indicators are just a sampling from the full set of Standards and were chosen because they create a sequence: the educator plans a lesson that sets clear and high **expectations**, the educator then delivers high quality **instruction**, and finally the educator uses a variety of **assessments** to see if students understand the material or if re-teaching is necessary. This example highlights teacher and student behaviors aligned to the three Indicators that you can expect to see in a rigorous kindergarten math classroom.

<table>
<thead>
<tr>
<th>Expectations (Standard II, Indicator E)</th>
<th>Instruction (Standard II, Indicator A)</th>
<th>Assessment (Standard I, Indicator B)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Plans and implements lessons that set clear and high expectations and also make knowledge accessible for all students.</td>
<td>Uses instructional practices that reflect high expectations regarding content and quality of effort and work; engage all students; and are personalized to accommodate diverse learning styles, needs, interests, and levels of readiness.</td>
<td>Uses a variety of informal and formal methods of assessments to measure student learning, growth, and understanding to develop differentiated and enhanced learning experiences and improve future instruction.</td>
</tr>
</tbody>
</table>

**What is the teacher doing?**
- Clearly communicating the learning objectives for the lesson orally and visually in student-friendly terms
- Creating culturally responsive lessons that engage and sustain student attention
- Modeling critical thinking strategies to help establish problem solving and processing expectations

**What are the students doing?**
- Using everyday and mathematical language to express their mathematical ideas
- Explaining their thinking when approaching a mathematical problem
- Contextualizing quantities and operations by using manipulatives, images or stories

**What is the teacher doing?**
- Providing opportunities and structures for students to communicate their mathematical ideas and thinking with each other
- Providing opportunities to look for generalizations among mathematical situations
- Highlighting commonalities, differences, and patterns in student’s ideas

**What are the students doing?**
- Specifically choosing symbols and words to express their mathematical ideas to others
- Working cooperatively on a shared activity
- Discussing with other students how multiple representations of numbers, operations and shapes relate to each other

**What is the teacher doing?**
- Conducting frequent checks for student understanding and adjusting instruction accordingly
- Prompting students to explain their reasoning and listening to their responses to identify misconceptions and gauge understandings
- Providing exemplars that convey mathematical reasoning and understanding (both teacher and student generated)

**What are the students doing?**
- Responding to teacher feedback to improve their work
- Demonstrating learning in multiple ways (e.g., conferences, task completion)
- Engaging in challenging learning tasks regardless of learning needs (e.g., linguistic background, disability, academic gifts)
