Recent research has identified the impact that trauma can have on neuro-development. As a result, many children who experience trauma not only exhibit identified learning problems but they develop social and behavioral difficulties that severely impede their ability to engage in the supportive relationships necessary to provide stability and enhance resiliency. This talk will offer an overview of how neuro-developmental issues are evidenced in learning and behavioral problems and offer some thoughts on how we can begin to help these children.

Kevin Creeden, M.A., LMHC, LMFT, is the Director of Assessment and Research at the Whitney Academy in East Freetown, MA. He has over 25 years of clinical experience treating children, adolescents, and their families, working extensively with sexually and physically aggressive youth. Over the past 15 years, Mr. Creeden’s primary focus has been on issues of trauma and attachment difficulties, especially with regard to the neurological impact of trauma on behavior. He has authored articles and book chapters on the behavioral difficulties of youth who have experienced trauma. In the past, Mr. Creeden has served as the president of the Massachusetts chapter of the American Professional Society on the Abuse of Children (APSAC). He is presently a Guest Faculty for the Trauma Training Program at the Boston University School of Social Work. Mr. Creeden trains and consults internationally to schools, youth service, and mental health service agencies.
